Looking for Data / AI Engineer roles (Full-time / Part-time / Consultancy)

SUMMARY

Data / AI professional specializing in the design, prototyping and deployment of AI-native solutions applied to concrete business problems. Experienced in multi-agent systems, workflow automation, LLM integration through APIs, and secure intelligent systems. Client-centric and proactive, able to understand user needs, translate business constraints into technical solutions, rapidly deliver functional prototypes, and communicate effectively with both technical and non-technical stakeholders.

EXPERIENCE

Transatel Artificial Intelligence / Automation Engineer Intern	Mar 2026 - présent Paris, France
- Designed and developed a real-time voice support agent with OpenAI Realtime API and local MCP servers, enabling interruptible voice conversations, secure tool execution, and reduced perceived backend latency through guardrailed workflows. - Built a peer-evaluation platform using FastAPI, integrating browser-side RSA/AES encryption and role-based access control to keep feedback unreadable on the server while enabling AI-generated summaries and scoring. - Automated Jira reporting for approximately 2400 Customer SIM tickets using Python, replacing manual exports with real-time KPIs, delay alerts and client prioritization, saving around 15 hours per week.	
École des Mines de Saint-Étienne Research Engineer Intern	Apr 2025 - Jul 2025 Saint-Étienne, France
- Developed a semantic multi-agent infrastructure integrating physical and simulated robotic environments through knowledge graphs, improving cross-system coordination by 40%. - Automated the generation of autonomous agents from semantic descriptions, reducing manual coding effort by 60% and increasing the scalability and flexibility of the architecture.	
Borsa Technologies Software Engineer (Remote)	Dec 2022 - May 2024 Washington, United States
- Integrated Python-based prediction and personalized recommendation models, improving data retrieval by 60% and user engagement by 20%. - Automated CI/CD workflows with GitHub Actions to detect deployment bugs and anomalies, improving legacy system reliability and operational efficiency by 80%.	

SKILLS

Natural Languages English : C2, French : C2
Computer Languages Python, C/C++, Java, RDF/RDFS, SPARQL, SQL/NoSQL
Tools Claude Code, Codex, Pytorch, Hugging Face, Unsloth, LangChain, FastAPI, Snowflake, AWS, Docker, Linux, LaTeX, Git, N8N, Power Automate
Concepts Transformers, vLLMs/LLMs, Agentic AI, RAG, MCP/CLI, NeuroSymbolique AI, AI Safety, Scientific Writing, Data Analysis, Documentation

EDUCATION

Université de Lyon (Université Jean Monnet/École des Mines de Saint-Étienne), France Master of Science in Computer Science: AI and IoT - M1 + M2 Courses: ML, Data Mining, Multi-agent Systems, Statistics, Semantic Web, IoT	Sep 2024 - Aug 2026 14.23 / 20
Addis Ababa University Bachelor's of Science(B.Sc.) in Computer Science Courses: Artificial Intelligence, Data Structures and Algorithms, Distributed Systems, Calculus I, Linear Algebra	Sep 2018 - Jul 2022 3.35 / 4
